

Stark® Orchard Fertilizer is a highly concentrated, nitrogenous fertilizer for use on established trees. Specially designed for use on trees over a year old with an established root system. Promotes vigorous growth. Increases the size of fruit and regular heavy bearing. May be used dry or mixed with water for spraying directly on foliage.

GUARANTEED ANALYSIS 45-0-0

Nitrogen (N).....	45%
Urea Nitrogen	45%
Derived from: Urea	

USE ONLY AS DIRECTED

DIRECTIONS FOR USE

Ground application - timing

Apply once per year. May be applied with good results any time before July, although the best time of application is in the early spring about two (2) weeks before growth starts.

Ground application - method

Scatter Stark® Orchard Fertilizer on top of the ground, sod or mulch in a circular band under the ends of the branches two (2) or three (3) feet wide. This does not need to be cultivated into the soil. It is soluble and will be washed down by the first rain or irrigation.

Ground application - amount of fertilizer

Use ¼ lb. for each inch in diameter of the trunk of the tree. For example, if the trunk of the tree is one inch in diameter, use ¼ lb.; if the trunk is 2 inches in diameter use ½ lb; if the trunk is 4 inches in diameter use 1 lb., etc.

Foliar spray application

Very quick results are obtained on apples and other types of fruit trees by dissolving one (1) lb. in 20 gallons of water and spraying the foliage thoroughly. Three applications are made with the first application made when the petals fall after blooming. Then follow up with two (2) additional applications at 10 day intervals.

CAUTION: Do not swallow. Avoid breathing dust. Avoid contact with eyes, open sores or cuts. Wash exposed skin thoroughly after use. Store in a dry place. Keep package closed tightly. **KEEP OUT OF REACH OF CHILDREN AND PETS.**
